

Mobile Sales Data Report

Project Overview

Build this comprehensive mobile Sales Data Dashboard, where you can easily track key metrics like Total Sales, Customer Ratings, Transactions by Payment Method, and more—all in one place. It gives detailed insights into mobile sales across different cities and by month, along with brand-specific performance and customer ratings.

The project includes data cleaning, data modelling, dashboard design, KPI tracking, and interactive visualizations to simulate a real-world business intelligence workflow.

Project Objectives

- Clean and transform raw data for analysis
 - Create an interactive and visually appealing dashboard
 - Analyse business trends and performance metrics
 - Build KPI-based visualizations for decision-making
 - Enable dynamic filtering and drill-down analysis
-

Tools & Technologies Used

- **Power BI Desktop**
 - **Power Query**
 - **Data Cleaning & Transformation**
 - **DAX (Data Analysis Expressions)**
 - **Interactive Visualizations**
 - **Data Modelling**
 - **Charts & KPI Cards**
-

Project Workflow

1. Data Cleaning & Transformation

- Removed duplicates and null values
- Corrected inconsistent data
- Changed data types where required
- Performed data transformation using Power Query

2. Data Modelling

- Established relationships between tables
- Structured the data model for reporting
- Optimized the dataset for dashboard performance

3. Dashboard Development

Created interactive dashboards using:

- KPI Cards
- Bar Charts
- Pie Charts
- Line Charts
- Filters & Slicers
- Trend Analysis Visuals

4. Business Analysis

Analysed:

- Sales performance
- Customer trends
- Regional performance
- Product/category insights
- Overall business metrics

Dashboard Features

- ✓ Interactive Dashboard
 - ✓ Dynamic Filtering with Slicers
 - ✓ KPI Tracking
 - ✓ Trend Analysis
 - ✓ Business Performance Monitoring
 - ✓ User-Friendly Visualizations
 - ✓ Drill-Down Reporting
-

☑ Key Insights

- Identified top-performing categories and regions
- Analysed business growth trends
- Compared performance metrics across segments
- Improved understanding of customer/business behaviour
- Created actionable insights for decision-making

🚀 Conclusion

This project demonstrates practical skills in Power BI including data cleaning, transformation, dashboard creation, KPI visualization, and business reporting. It showcases the ability to convert raw data into interactive dashboards and meaningful business insights.
